PROJECT TITLE: Which Factor Most Affects Exam Score?

OBJECTIVE:

To find which factor (Attendance vs Study Time) is most related to Exam Score using correlation analysis.

TOOLS USED:

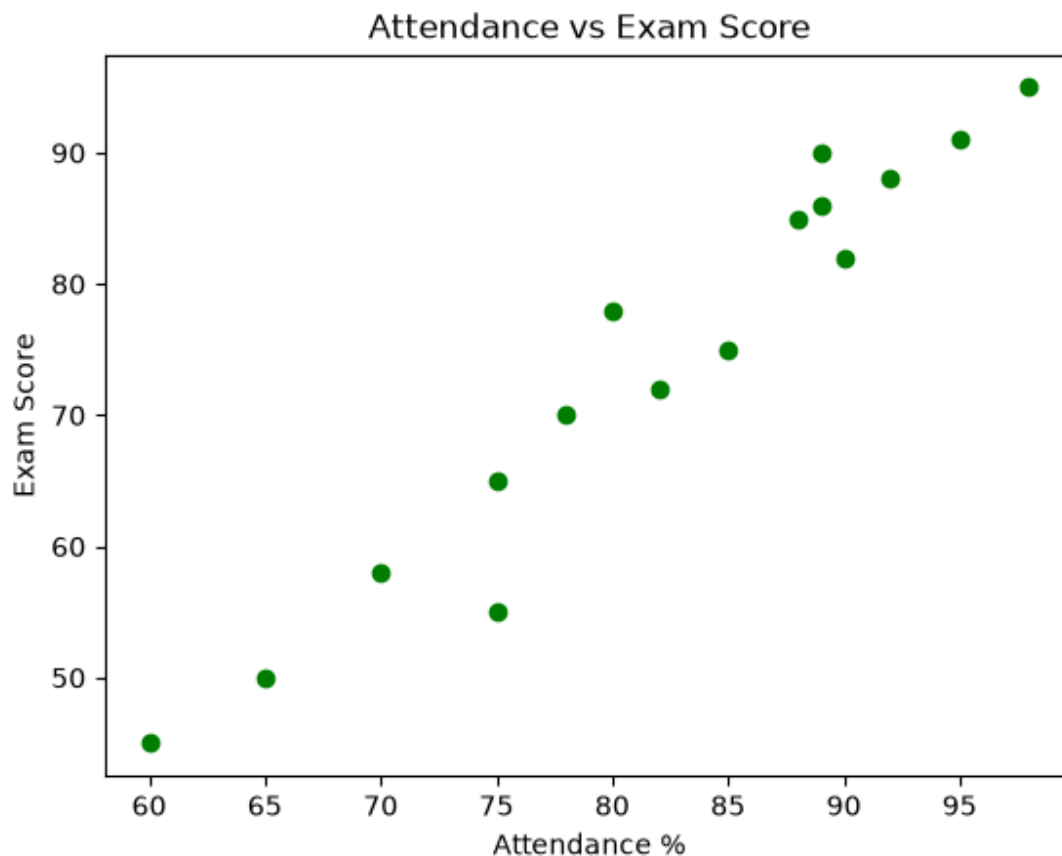

Python, Pandas, Matplotlib, Pearson Correlation, EDA

DATASET:

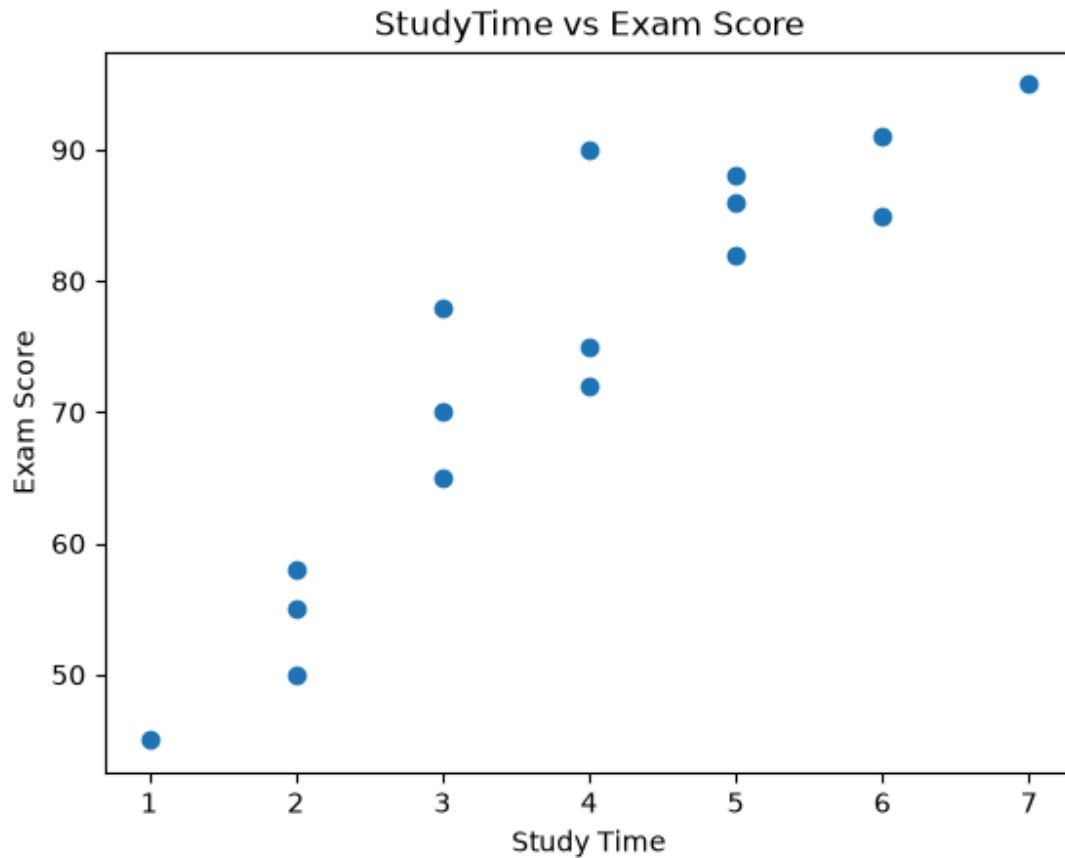

20 students, 3 columns: Attendance (%), StudyTime (hours), ExamScore

ANALYSIS & RESULTS:

1. Attendance vs ExamScore: Correlation = 0.970 (Very Strong)

2. StudyTime vs ExamScore: Correlation = 0.917 (Strong)

VISUALS:

[Insert the 2 clean graphs here - Attendance graph and StudyTime graph]

(Download clean graphs from the files I gave you: att_final.png and study_final.png)

KEY INSIGHT:

Attendance is the MOST important factor. It is stronger than Study Time.

BUSINESS RECOMMENDATION:

- For EdTech companies: Track low attendance students and send reminders.
- Improving attendance from 70% to 90% can increase exam score by 15-20 points.
- Focus on consistency before increasing study hours.

CONCLUSION:

Attendance (0.970) is more related to Exam Score than Study Time (0.917).
